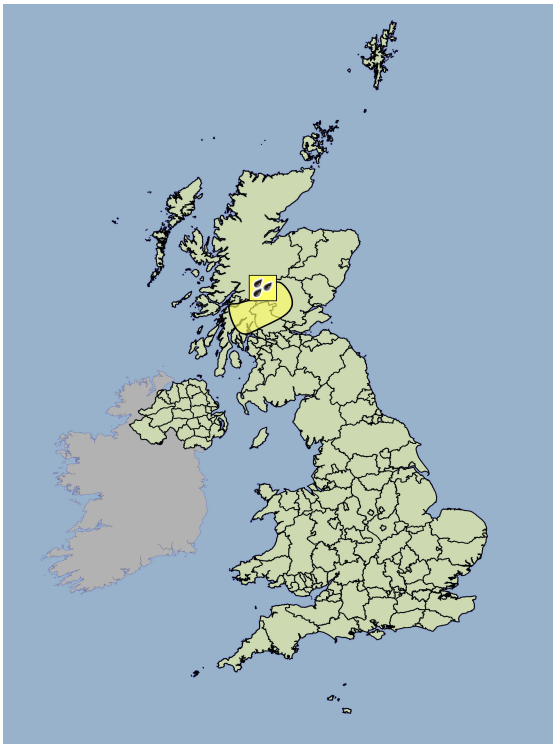
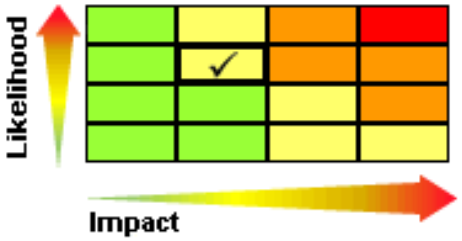
National Severe Weather Warning Service





Chief Forecasters Assessment
Two areas of deep low pressure will bring spells of heavy and persistent rain and strong to gale force winds across the region during the next couple of days. Heavy rain overnight Monday into Tuesday morning, then a lull with a second spell of wet and windy weather in the same area during Wednesday will increase the risk of localised flooding in places. Expect 20-40 mm quite widely and locally 50 mm over highest ground from each event, probably with some enhancement from snow-melt over the mountains.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **03:00 on Tue, 16th Apr 2013** until **18:00 on Wed, 17th Apr 2013**

Spells of heavy rain are expected overnight into Tuesday morning, the rain gradually easing during Tuesday afternoon; however a further belt of heavy rain will develop across the area during Wednesday morning and afternoon. The public should be aware of possible localised flooding in prone areas.
